AMBIENTE • EFICIENCIA • SUSTENTABILIDAD

The moment we're living in

Climate change is no longer a future agenda. Companies today face requirements from multiple fronts:

- 🌱 Customers demanding transparency across their value chains
- 🌱 Investors incorporating ESG criteria into their decisions
- 🌱 Regulatory frameworks moving toward mandatory reporting
- 🌱 International markets requiring verified data

Organizations that act today don't just reduce their risk — they build real competitive advantage.

Why a sustainability strategy?

Market access

Tenders, export contracts, and credit lines increasingly incorporate environmental criteria

Cost reduction

Energy efficiency and resource optimization generate a direct, measurable economic return

Risk management

Physical and transition climate risks are business risks that can be anticipated and managed

Reputation and brand

Genuine, verifiable environmental commitment sets a company apart in the market and with its customers

Organizational culture

Builds internal cohesion, a sense of purpose, and attracts qualified talent to the organization

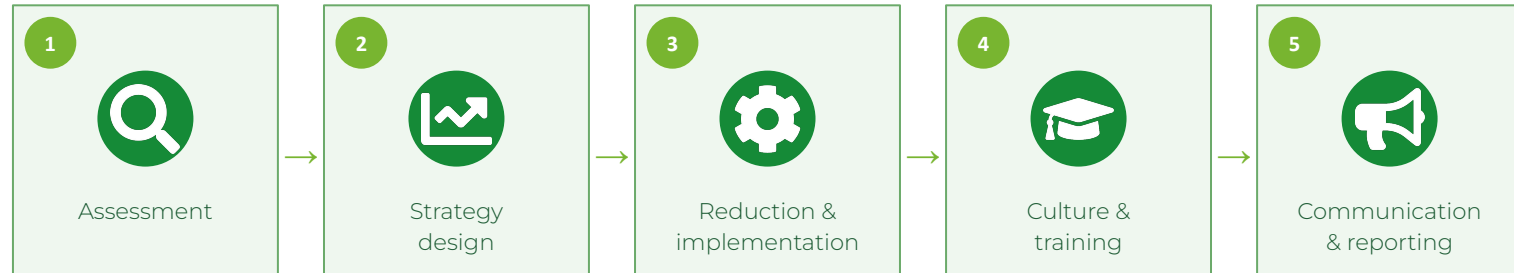

Regulatory compliance

Prepares the organization for regulatory frameworks in Argentina and worldwide that are moving toward mandatory compliance

Our comprehensive approach

We support organizations through the entire process, from initial assessment to the verified communication of their achievements.

Measure your Carbon Footprint

We apply internationally recognized methodologies (ISO 14064-1, ISO 14067, GHG Protocol, IPCC AR6) to precisely quantify the organization's emissions.

 **Scope 1:** Direct emissions: fuel, processes, and own fleet

 **Scope 2:** Purchased electricity consumption

 **Scope 3:** Indirect emissions: waste, travel, value chain

Design Your Sustainability Strategy

Measuring the footprint is the starting point, not the destination. We design a strategy built into the business, with short-, medium-, and long-term goals aligned to international frameworks and real capabilities.

- Materiality analysis and strategic priorities
- Science Based Targets
- Integration with the business plan
- Indicators and a periodic monitoring system

Reduce Your Carbon Footprint

Measurement is the diagnosis. The real goal is to reduce emissions year after year. We work together with the company's sustainability committee to define an Action Plan with concrete actions, data-driven targets, and regular monitoring.

-  Energy efficiency and the transition to renewables
-  Logistics and production process optimization
-  Substitution of critical materials and inputs
-  Management and reduction of waste generated

Organizational Culture and Training

Real change happens when people within the organization understand why it matters and how they can contribute. We design and implement programs tailored to every organizational level.

- 🌱 Climate change awareness workshops
- 🌱 Training in emissions management and efficiency
- 🌱 Incentive programs
- 🌱 Integration of environmental KPIs by department

Offset Your Carbon Footprint

When reduction targets can't be fully achieved, or when the goal is carbon neutrality, residual emissions can be offset by contributing to verified projects.

***Offsetting is the last step, never the first.
Reduction always comes first.***

-  Afforestation and reforestation projects
-  Certified renewable energy
-  Fossil fuel substitution

Communicate Commitment

A well-built sustainability process deserves to be communicated with the same rigor with which it was developed. We help prepare verifiable reports and communications for all stakeholders.

- Sustainability reports (GRI, CDP, custom format)
- ISO 14064-3 conformity statements
- Internal and stakeholder communication

Our work

We apply internationally recognized methodologies for:

- Organizational Carbon Footprint (ISO 14064)
- Product Carbon Footprint (ISO 14067)
- Event Carbon Footprint
- Carbon footprint of agricultural and livestock production
- Emissions analysis for forestry systems
- Organizational Sustainability Strategy
- Training and Organizational Culture
- Sustainability Reporting and Communication

Why Almerix?

Verified scientific rigor

Experience in auditing and verification processes. We apply ISO 14064-1, ISO 14067, GHG Protocol, and IPCC AR6 with full methodological traceability.

Local and global expertise

We combine international standards with emission factors specific to Argentina for precise, defensible results.

Comprehensive support

We don't just deliver a report. We build a continuous improvement process together with the organization, from assessment to public communication.

Cross-sector experience

We work with industrial, agro-industrial, and service companies, event organizers, consumer goods businesses, and organizations across many sectors.
